## 1. Fundamental and derivate quantities and units

- Fundamental Physical quantities are those that can be directly defined, and for which the units is choused arbitrarily, independent of others physical quantities.

| No. | Fundamental Quantity | Unit | Symbol | Dimension |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Length | Meter | m | L |
| 2 | Time | Second | s | T |
| 3 | Mass | Kilogram | kg | M |
| 4 | Current intensity | Ampere | A | I |
| 5 | Light intensity | Candela | Cd | J |
| 6 | Temperature | Kelvin | K | $\theta$ |
| 7 | Solid angle | Ste-radian | Sr |  |
| 8 | Plane angle | Radian | rad |  |

- The derivative physical quantities are those that are defined indirectly. They have the measurement units' functions of fundamental units.

If we have:

- $\mathrm{U}=\mathrm{U}(\mathrm{L}, \mathrm{T}, \mathrm{M}, \mathrm{I}, \mathrm{J}, \theta)$
- $\quad[U]=L^{\alpha} T^{\beta} M^{\gamma} I^{\delta} \mathbf{J}^{\varepsilon} \theta^{\xi}$

## 2 The homogeneity of physical equations:

- The physical formulas are invariant to the measurement units' transformation.

3 Example:
3.1 Velocity:

$$
\begin{equation*}
\mathrm{v}_{\lim _{\Delta t \rightarrow 0}}^{=} \frac{\Delta \mathrm{x}}{\Delta \mathrm{t}}=\frac{\mathrm{dx}}{\mathrm{dt}} \quad[\mathrm{v}]=\frac{[\mathrm{x}]}{[\mathrm{t}]}=\frac{\mathrm{m}}{\mathrm{~s}}=\mathrm{m} \cdot \mathrm{~s}^{-1}=\mathrm{L} \cdot \mathrm{~T}^{-1} \tag{1}
\end{equation*}
$$

3.2 Acceleration:

$$
\begin{equation*}
\mathrm{a}_{\lim _{\Delta \mathrm{t} \rightarrow 0}}=\frac{\Delta \mathrm{v}}{\Delta \mathrm{t}}=\frac{\mathrm{dv}}{\mathrm{dt}} \quad[\mathrm{a}]=\frac{[\mathrm{v}]}{[\mathrm{t}]}=\frac{\mathrm{m}}{\mathrm{~s}^{2}}=\mathrm{m} \cdot \mathrm{~s}^{-2}=\mathrm{L} \cdot \mathrm{~T}^{-2} \tag{2}
\end{equation*}
$$

3.3 Impulse:

$$
\begin{equation*}
\mathrm{p}=\mathrm{m} \cdot \mathrm{v} \quad[\mathrm{p}]=[\mathrm{m}] \cdot[\mathrm{v}]=\mathrm{kg} \frac{\mathrm{~m}}{\mathrm{~s}}=\mathrm{kg} \cdot \mathrm{~m} \cdot \mathrm{~s}^{-1}=\mathrm{M} \cdot \mathrm{~L} \cdot \mathrm{~T}^{-1} \tag{3}
\end{equation*}
$$

3.4 Force:

$$
\mathrm{F}_{\mathrm{l} \mathrm{lim}_{\Delta t \rightarrow 0}=}=\frac{\Delta \mathrm{p}}{\Delta \mathrm{t}}=\frac{\mathrm{dp}}{\mathrm{dt}}=\frac{\mathrm{dmv}}{\mathrm{dt}}=\mathrm{m} \frac{\mathrm{dv}}{\mathrm{dt}}=\mathrm{m} \cdot \mathrm{a}
$$

$$
\begin{equation*}
[\mathrm{F}]=\frac{[\mathrm{p}]}{[\mathrm{t}]}=\frac{\mathrm{kg} \cdot \mathrm{~m}}{\mathrm{~s}^{2}}=\mathrm{kg} \cdot \mathrm{~m} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L} \cdot \mathrm{~T}^{-2} \quad[\mathrm{~F}]=1 \frac{\mathrm{~kg} \cdot \mathrm{~m}}{\mathrm{~s}^{2}}=1 \mathrm{~N} \tag{4}
\end{equation*}
$$

3.5 Pressure:

$$
\begin{equation*}
\mathrm{P}=\frac{\mathrm{dF}}{\mathrm{dS}} \quad[\mathrm{P}]=\frac{[\mathrm{F}]}{[\mathrm{S}]}=\frac{\mathrm{kg}}{\mathrm{~s}^{2} \cdot \mathrm{~m}}=\mathrm{kg} \cdot \mathrm{~m}^{-1} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L}^{-1} \cdot \mathrm{~T}^{-2} \quad[\mathrm{P}]=1 \frac{\mathrm{~N}}{\mathrm{~m}^{2}}=1 \mathrm{~Pa} \tag{5}
\end{equation*}
$$

3.6 Mechanical work:

$$
\begin{equation*}
\mathrm{dL}=\mathrm{F} \cdot \mathrm{ds} \quad[\mathrm{~L}]=[\mathrm{F}] \cdot[\mathrm{s}]=\mathrm{kg} \frac{\mathrm{~m}^{2}}{\mathrm{~s}^{2}}=\mathrm{kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L}^{2} \cdot \mathrm{~T}^{-2} \quad[\mathrm{~L}]=1 \mathrm{~N} \cdot \mathrm{~m}=1 \mathrm{~J} \tag{6}
\end{equation*}
$$

3.7 Kinetic energy:

$$
\begin{align*}
\mathrm{E}_{\mathrm{c}} & =\frac{\mathrm{m} \cdot \mathrm{v}^{2}}{2} ; \\
& {\left[\mathrm{E}_{\mathrm{c}}\right]=[\mathrm{m}][\mathrm{v}]^{2}=\frac{\mathrm{kg} \cdot \mathrm{~m}^{2}}{\mathrm{~s}^{2}}=\mathrm{kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L}^{2} \cdot \mathrm{~T}^{-2} ;\left[\mathrm{E}_{\mathrm{c}}\right]=1 \mathrm{~kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=1 \mathrm{~J} } \tag{7}
\end{align*}
$$

3.8 Gravitational potential Energy:

$$
\begin{gather*}
\mathrm{E}_{\mathrm{p}}=\mathrm{m} \cdot \mathrm{~g} \cdot \mathrm{~h} \\
{\left[\mathrm{E}_{\mathrm{p}}\right]=[\mathrm{m}] \cdot[\mathrm{g}] \cdot[\mathrm{h}]=\mathrm{kg} \frac{\mathrm{~m}^{2}}{\mathrm{~s}^{2}}=\mathrm{kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L}^{2} \cdot \mathrm{~T}^{-2} ;\left[\mathrm{E}_{\mathrm{p}}\right]=1 \mathrm{~kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=1 \mathrm{~J}} \tag{8}
\end{gather*}
$$

3.9 Elastically potential Energy:

$$
\begin{align*}
& E_{p, \mathrm{e}}=\frac{\mathrm{k} \cdot \mathrm{x}^{2}}{2} \\
& \quad\left[\mathrm{E}_{\mathrm{p}, \mathrm{e}}\right]=[\mathrm{k}][\mathrm{x}]^{2}=\frac{\mathrm{kg} \cdot \mathrm{~m}^{2}}{\mathrm{~s}^{2}}=\mathrm{kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=\mathrm{M} \cdot \mathrm{~L}^{2} \cdot \mathrm{~T}^{-2} ;\left[\mathrm{E}_{\mathrm{p}, \mathrm{e}}\right]=1 \mathrm{~kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-2}=1 \mathrm{~J} \tag{9}
\end{align*}
$$

3.10 Power:

$$
\mathrm{P}=\frac{\mathrm{dE}}{\mathrm{dt}}
$$

$$
\begin{equation*}
[\mathrm{P}]=\frac{[\mathrm{E}]}{[\mathrm{t}]}=\frac{\mathrm{kg} \cdot \mathrm{~m}^{2}}{\mathrm{~s}^{3}}=\mathrm{kg} \cdot \mathrm{~m}^{2} \cdot \mathrm{~s}^{-3}=\mathrm{M} \cdot \mathrm{~L}^{2} \cdot \mathrm{~T}^{-3} \quad[\mathrm{P}]=1 \frac{\mathrm{~J}}{\mathrm{~s}}=1 \mathrm{~W} \tag{10}
\end{equation*}
$$

3.11 Density:

$$
\begin{equation*}
\rho=\frac{\mathrm{dm}}{\mathrm{dV}} \quad[\rho]=\frac{[\mathrm{m}]}{[\mathrm{V}]}=\frac{\mathrm{kg}}{\mathrm{~m}^{3}}=\mathrm{kg} \cdot \mathrm{~m}^{-3}=\mathrm{M} \cdot \mathrm{~L}^{-3} \tag{11}
\end{equation*}
$$

3.12 Angular velocity:

$$
\begin{equation*}
\omega=\frac{\mathrm{d} \varphi}{\mathrm{dt}} \quad[\omega]=\frac{[\varphi]}{[\mathrm{t}]}=\frac{\mathrm{rad}}{\mathrm{~s}}=\mathrm{rad} \cdot \mathrm{~s}^{-1}=\mathrm{T}^{-1} \tag{12}
\end{equation*}
$$

3.13 Solid angle:

$$
\begin{equation*}
\mathrm{d} \Omega=\frac{\mathrm{dA}}{\mathrm{R}^{2}} \quad[\Omega]=\frac{[\mathrm{A}]}{[\mathrm{R}]^{2}}=\frac{\mathrm{m}^{2}}{\mathrm{~m}^{2}}=\mathrm{L}^{0}=1 \quad[\Omega]=1 \mathrm{~L}^{0}=1 \text { steradian } \tag{13}
\end{equation*}
$$

4 Establishes into a constant approximation the formula of a gravitational (mathematical) pendulum, T using the homogeneity of the dimensional equations.

R: From direct observation the physical quantities that can occur are: the length (l), mass of the pendulum ( m ), gravitational acceleration ( g ).
$\mathrm{T}=\mathrm{k} 1^{\alpha} \mathrm{m}^{\beta} \mathrm{g}^{\gamma}$
$\mathrm{T}^{1}=\mathrm{k}^{0} \cdot \mathrm{~L}^{\alpha} \cdot \mathrm{M}^{\beta} \cdot\left(\mathrm{L} \cdot \mathrm{T}^{-2}\right)^{\gamma} \Rightarrow \mathrm{T}^{1}=\mathrm{L}^{\alpha+\gamma} \cdot \mathrm{M}^{\beta} \cdot \mathrm{T}^{-2 \gamma}$, then by identifying the upper coefficients:
$\left\{\begin{array}{l}\alpha+\beta=0 \\ \beta=0 \\ -2 \gamma=1\end{array} \quad \Rightarrow\left\{\begin{array}{l}\alpha=\frac{1}{2} \\ \beta=0 \\ \gamma=-\frac{1}{2}\end{array} \quad \mathrm{~T}=\mathrm{kl}^{1 / 2} \mathrm{~m}^{0} \mathrm{~g}^{-1 / 2} \Rightarrow \mathrm{~T}=\mathrm{k} \sqrt{\frac{1}{\mathrm{~g}}}\right.\right.$
5 The mass of a parachute with jumper (parachutist) is $\mathrm{m}=100 \mathrm{~kg}$, and is launched from a tower completely open with no initial velocity. Find the velocity expression, $v(t)$ and the velocity limit if we know that the resistance force is proportional with the velocity, $\mathrm{R}=\mathrm{kv}$, where $\mathrm{k}=500 \mathrm{Ns} / \mathrm{m}$.
$R$ : If the force is defined as: $\overrightarrow{\mathrm{F}}=\mathrm{m} \overrightarrow{\mathrm{a}}$
Along vertical direction can be rewritten as: $F=m \frac{d v}{d t}$
The resultant (net) force is $F=G-R$, then:
$m \frac{d v}{d t}=m g-k v \Rightarrow \int_{v(0)}^{g} \frac{d v}{v(t)} \mathrm{k} v=\int_{0}^{t} d t^{\prime} \Rightarrow-\left.\frac{m}{k} \ln \left(g-\frac{k}{m} v\right)\right|_{v(0)} ^{v(t)}=t \stackrel{v(0)=0}{\Rightarrow} \ln \left(1-\frac{k}{m g} v(t)\right)=-\frac{k}{m} t$
$\Rightarrow \quad \mathrm{v}(\mathrm{t})=\frac{\mathrm{mg}}{\mathrm{k}}\left(1-\mathrm{e}^{-\frac{\mathrm{k}}{\mathrm{m}}}\right)$.
If we will replace the physical quantities with values we get:
$\mathrm{v}(\mathrm{t})=\frac{100 \cdot 10}{500}\left(1-\mathrm{e}^{-\frac{500}{100}}\right) \Rightarrow \mathrm{v}(\mathrm{t})=2\left(1-\mathrm{e}^{-5 \mathrm{t}}\right)\left[\frac{\mathrm{m}}{\mathrm{s}}\right]$
For the time goes to infinity one obtains:
$v_{\lim }=\lim _{t \rightarrow \infty} v(t)=\lim _{t \rightarrow \infty}\left\{\frac{m g}{k}\left(1-e^{-\frac{k}{m}}\right)\right\} \Rightarrow v_{\lim }=\frac{m g}{k}=\frac{100 \cdot 10}{500} \Rightarrow v_{\lim }=2 \frac{\mathrm{~m}}{\mathrm{~s}}=7.2 \frac{\mathrm{~km}}{\mathrm{~h}}$
Finally the velocity expression can be written as:
$v(t)=v_{\lim }\left(1-e^{-\frac{k_{t}}{m}}\right)$
6. A skier with the weight $G$ descends a hill that make an angle $\alpha$ with the horizontal plane. The motion equations are $\mathrm{x}=\mathrm{Agt}^{2}$ along the hill land $\mathrm{y}=0$, where g is the gravitational acceleration
and $\boldsymbol{A}$ a constant coefficient. How much is the friction force between skier and snow on the hill. (Particular case: the skier mass $\mathrm{m}=70 \mathrm{~kg}$, angle $\alpha=30^{\circ} ; \mathrm{A}=0.1$ ).

R: The second principle of dynamics can be written as:

$$
\overrightarrow{\mathrm{G}}+\overrightarrow{\mathrm{R}}+\overrightarrow{\mathrm{F}}_{\mathrm{f}}=\mathrm{m} \overrightarrow{\mathrm{a}}
$$

The projections along $x$ and $y$ axes are:
$G \sin (\alpha)-F_{f}=m a_{x}$
$\mathrm{R}-\mathrm{G} \cos (\alpha)=\mathrm{ma}_{\mathrm{y}}$
The component of accelerations can be computed with the following equations:

$$
\begin{aligned}
& \mathrm{a}_{\mathrm{x}}=\frac{\mathrm{d}^{2} \mathrm{x}}{\mathrm{dt}^{2}}=\frac{\mathrm{d}^{2}\left(\mathrm{Agt}^{2}\right)}{\mathrm{dt}^{2}}=2 \mathrm{Ag} \\
& \mathrm{a}_{\mathrm{y}}=\frac{\mathrm{d}^{2} \mathrm{y}}{\mathrm{dt}^{2}}=\frac{\mathrm{d}^{2}(0)}{\mathrm{dt}^{2}}=0
\end{aligned}
$$

With those:

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{f}}=\mathrm{G} \sin (\alpha)-2 \mathrm{Amg}=\mathrm{G}[\sin (\alpha)-2 \mathrm{~A}] \\
& \mathrm{F}_{\mathrm{f}}=\mathrm{mg}[\sin (\alpha)-2 \mathrm{~A}]=70 \cdot 9.81[\sin (30)-2 \cdot 0.1]=686.7 \cdot 0.3 \\
& \mathrm{~F}_{\mathrm{f}}=206.01 \mathrm{~N}
\end{aligned}
$$

7. A material point with mass $m$ is moving along a trajectory given by the Cartesian components: $\mathrm{x}(\mathrm{t})=\mathrm{A} \cos (\mathrm{kt})$ and $\mathrm{y}(\mathrm{t})=\mathrm{B} \cos (\mathrm{kt})$. Characterize the force F that produces this type of motion if we know that the force depends only by the material point position. Give some examples.

R : The force components along Ox and Oy axes are:

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{x}}=\mathrm{m} \cdot \mathrm{a}_{\mathrm{x}}=\mathrm{m} \cdot \ddot{\mathrm{x}} \Rightarrow \mathrm{~F}_{\mathrm{x}}=\mathrm{m} \cdot \frac{\mathrm{~d}}{\mathrm{dt}} \dot{\mathrm{x}}=-\mathrm{mk} \cdot \frac{\mathrm{~d}}{\mathrm{dt}}[\mathrm{~A} \sin (\mathrm{kt})]=-m \mathrm{k}^{2} A \cos (\mathrm{kt})=-\mathrm{mk}^{2} \mathrm{x} \\
& \mathrm{~F}_{\mathrm{y}}=\mathrm{m} \cdot \mathrm{a}_{\mathrm{y}}=\mathrm{m} \cdot \ddot{\mathrm{y}} \Rightarrow \mathrm{~F}_{\mathrm{y}}=\mathrm{m} \cdot \frac{\mathrm{~d}}{\mathrm{dt}} \dot{\mathrm{y}}=-\mathrm{mk} \cdot \frac{\mathrm{~d}}{\mathrm{dt}}[\mathrm{~B} \sin (\mathrm{kt})]=-m \mathrm{k}^{2} \mathrm{~B} \cos (\mathrm{kt})=-\mathrm{mk}^{2} \mathrm{y}
\end{aligned}
$$

The force modulus is:

$$
\mathrm{F}=\sqrt{\mathrm{F}_{\mathrm{x}}^{2}+\mathrm{F}_{\mathrm{y}}^{2}}=\mathrm{mk}^{2} \sqrt{\mathrm{x}^{2}+\mathrm{y}^{2}}=\mathrm{mk}^{2} \mathrm{r}
$$

where $\overrightarrow{\mathrm{r}}$ is the material point position vector.
The ratio:

$$
\begin{aligned}
& \frac{F_{x}}{F}=\frac{-m k^{2} x}{m k^{2} r}=\frac{-x}{r}=\cos (\hat{x, F}) \\
& \frac{F_{y}}{F}=\frac{-m k^{2} y}{m k^{2} r}=\frac{-y}{r}=\cos (\hat{y, F})
\end{aligned}
$$

In the same time are the angles between the position vector and OX and OY axes, respectively. From here we can observe that the force F is anti-parallel with the position vector. Then the force F is pointing to the centre of the reference frame. Such a force is called attraction central force.
8. On a body with a mass $\boldsymbol{m}=2 \mathrm{~kg}$ are acting two forces, $\boldsymbol{F}_{1}=3 \mathrm{~N}$ and $\boldsymbol{F}_{2}=4 \mathrm{~N}$, which are characterized by the angles $\alpha_{1}=60^{\circ}$, and $\alpha_{2}=120^{\circ}$ respectively, with the direction of velocity $\overrightarrow{\mathrm{v}}_{0}$. Find the body acceleration, $\boldsymbol{a}$, velocity, $\mathbf{v}$ and the distance covered into a time $\mathrm{t}=10 \mathrm{~s}$ starting from the beginning of motion (Particular case $\mathrm{v}_{0}=20 \mathrm{~m} / \mathrm{s}$ ).

R: If we are considering a reference frame related to earth then the acceleration components along OX and OY axes are:

$$
\begin{aligned}
& a_{x}=\frac{\mathrm{F}_{1} \cos \alpha_{1}+\mathrm{F}_{2} \cos \alpha_{2}}{m}=\frac{3 \cos (60)+4 \cos (120)}{2}=\frac{3 \cdot 0.5-4 \cdot 0.5}{2}=-\frac{1}{4}=-0.25 \mathrm{~m} / \mathrm{s}^{2} \\
& \mathrm{a}_{\mathrm{y}}=\frac{\mathrm{F}_{1} \sin \alpha_{1}+\mathrm{F}_{2} \sin \alpha_{2}}{\mathrm{~m}}=\frac{3 \frac{\sqrt{3}}{2}+4 \frac{\sqrt{3}}{2}}{2}=\frac{7 \sqrt{3}}{4}=3.03 \mathrm{~m} / \mathrm{s}^{2}
\end{aligned}
$$

and the acceleration modulus:

$$
a=\sqrt{a_{x}^{2}+a_{y}^{2}}=\sqrt{0.25^{2}+3.03^{2}}=\sqrt{0.0625+9.1809}=\sqrt{9.2434}=3.04 \mathrm{~m} / \mathrm{s}^{2}
$$

We observe that the acceleration is constant in time ( $\mathrm{a}=$ const ), the velocity equation can be computed from:

$$
\mathrm{a}=\frac{\mathrm{dv}}{\mathrm{dt}} \Rightarrow \mathrm{dv}=\mathrm{a} \cdot \mathrm{dt} \Rightarrow \int_{\mathrm{v}_{0}}^{\mathrm{v}(\mathrm{t})} \mathrm{dv}=\int_{0}^{\mathrm{t}} \mathrm{a} \cdot d \mathrm{t}^{\prime} \Rightarrow \mathrm{v}(\mathrm{t})-\mathrm{v}_{0}=\mathrm{at} \Rightarrow \mathrm{v}(\mathrm{t})=\mathrm{v}_{0}+\mathrm{at}
$$

or by components:

$$
\begin{array}{lll}
\mathrm{v}_{\mathrm{x}}(\mathrm{t})=\mathrm{v}_{0 \mathrm{x}}+\mathrm{a}_{\mathrm{x}} \mathrm{t} & \mathrm{cu} & \mathrm{v}_{0 \mathrm{x}}=\mathrm{v}_{0} \\
\mathrm{v}_{\mathrm{y}}(\mathrm{t})=\mathrm{v}_{0 \mathrm{y}}+\mathrm{a}_{\mathrm{y}} \mathrm{t} & \mathrm{cu} & \mathrm{v}_{0}=0
\end{array}
$$

and from here:

$$
\begin{aligned}
& v_{x}(t)=v_{0}+a_{x} t=20-0.25 \cdot 10=17.5 \mathrm{~m} / \mathrm{s} \\
& v_{y}(t)=a_{y} t=3.03 \cdot 10=30.3 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

and the velocity modulus:

$$
v=\sqrt{v_{x}^{2}+v_{y}^{2}}=\sqrt{17.5^{2}+30.3^{2}}=\sqrt{306.25+918.09}=\sqrt{1224.34}=34.99 \mathrm{~m} / \mathrm{s}
$$

The velocity, $\overrightarrow{\mathrm{v}}$ at time t makes an angle $\alpha \mathrm{cu} \overrightarrow{\mathrm{v}}_{0}$ given by the equation:

$$
\operatorname{tg} \alpha=\frac{\mathrm{v}_{\mathrm{y}}}{\mathrm{v}_{\mathrm{x}}} \Rightarrow \alpha=\operatorname{arctg}\left(\frac{\mathrm{v}_{\mathrm{y}}}{\mathrm{v}_{\mathrm{x}}}\right) \Rightarrow \alpha=\operatorname{arctg}\left(\frac{30.3}{17.5}\right)=\operatorname{arctg}(1.731)=59^{\circ} 59^{\prime} 28^{\prime \prime} .
$$

In order to compute the distance we have:

$$
\begin{aligned}
& \mathrm{v}=\frac{\mathrm{ds}}{\mathrm{dt}} \Rightarrow \mathrm{ds}=\mathrm{v} \cdot \mathrm{dt} \Rightarrow \int_{\mathrm{s}_{0}}^{\mathrm{s}(\mathrm{t})} \mathrm{dv}=\int_{0}^{\mathrm{t}} \mathrm{v} \cdot \mathrm{dt} \mathrm{t}^{\prime} \Rightarrow \mathrm{s}(\mathrm{t})-\mathrm{s}_{0}=\int_{0}^{\mathrm{t}}\left(\mathrm{v}_{0}+\mathrm{at}\right) \cdot \mathrm{dt} \mathrm{t}^{\prime} \\
& \Rightarrow \mathrm{s}(\mathrm{t})=\mathrm{s}_{0}+\mathrm{v}_{0} \mathrm{t}+\frac{\mathrm{at}^{2}}{2} \stackrel{\mathrm{~s}_{0} 0}{\Rightarrow} \mathrm{~s}(\mathrm{t})=\mathrm{v}_{0} \mathrm{t}+\frac{\mathrm{at}^{2}}{2}=20 \cdot 10+\frac{3.04 \cdot 100}{2}=200+152=352 \mathrm{~m}
\end{aligned}
$$

or by components:
$x(t)=v_{0} t+\frac{\mathrm{a}_{x} \mathrm{t}^{2}}{2}=20 \cdot 10-\frac{0.25 \cdot 100}{2}=200-12.5=187.5 \mathrm{~m}$
$\mathrm{y}(\mathrm{t})=\frac{\mathrm{a}_{\mathrm{y}} \mathrm{t}^{2}}{2}=\frac{3.03 \cdot 100}{2}=151.5 \mathrm{~m}$
9. A tractor is traveling with a velocity of $\mathrm{v}_{0}=36 \mathrm{~km} / \mathrm{h}$. If the radius of the wheel is $\mathrm{R}=0.5 \mathrm{~m}$ find out:
a) The parametric motion equations of a point from the external wheel circumference.
b) The tangential velocity components and the value of velocity.
c) The path distance by a point between two contacts with the road.
$\mathrm{R}: \quad$ a) $\quad \mathrm{v}=\omega \mathrm{R} \Rightarrow \omega=\frac{\mathrm{v}_{0}}{\mathrm{R}}=20 \frac{\mathrm{rad}}{\mathrm{s}}$
$\left\{\begin{array}{l}x_{=}=v_{0} t+x_{w} \\ y=0 \cdot t+y_{w}\end{array} \quad\left\{\begin{array}{l}x_{w}=x_{C W}+x_{R} \\ y_{w}=y_{C W}+y_{R}\end{array} \quad\left\{\begin{array}{l}x_{C W}=0 \\ y_{C W}=R+y_{R}\end{array} \quad\left\{\begin{array}{l}x_{R}=-R \sin (\omega t) \\ y_{R}=-R \cos (\omega t)\end{array}\right.\right.\right.\right.$
$\left\{\begin{array}{l}x_{R}=v_{0} t-R \sin (\omega t)=10 t-0.5 \sin (20 t) \\ y_{R}=R-R \cos (\omega t)=0.5-0.5 \cos (20 t)\end{array}\right.$
this is the equations of a cycloid.
b) $\mathrm{v}_{\mathrm{x}}=\frac{\mathrm{dx}}{\mathrm{dt}}=\mathrm{v}_{0}-\omega \mathrm{R} \cos (\omega \mathrm{t})=\mathrm{v}_{0}[1-\cos (\omega \mathrm{t})]=10[1-\cos (20 \mathrm{t})]$
$\mathrm{v}_{\mathrm{y}}=\frac{\mathrm{dy}}{\mathrm{dt}}=\omega \mathrm{R} \sin (\omega \mathrm{t})=\mathrm{v}_{0} \sin (\omega \mathrm{t})=10 \sin (20 \mathrm{t})$
$\mathrm{v}=\sqrt{\mathrm{v}_{\mathrm{x}}^{2}+\mathrm{v}_{\mathrm{y}}^{2}}=\sqrt{\mathrm{v}_{0}^{2}[1-\cos (\omega \mathrm{t})]^{2}+\mathrm{v}_{0}^{2} \sin ^{2}(\omega \mathrm{t})}=\mathrm{v}_{0} \sqrt{2(1-\cos (\omega \mathrm{t}))}=2 \mathrm{v}_{0} \sin \frac{\omega \mathrm{t}}{2}$
$\mathrm{v}=20 \sin 10 \mathrm{t}$
c) $\quad \mathrm{v}=\frac{\mathrm{ds}}{\mathrm{dt}}$
$\mathrm{ds}=\mathrm{vdt} \Rightarrow \mathrm{ds}=2 \omega \mathrm{R} \sin \frac{\omega \mathrm{t}}{2} \mathrm{dt} \stackrel{\varphi=\omega t}{\Rightarrow} \Rightarrow \mathrm{dp}=\mathrm{odt} \quad \mathrm{ds}=2 \mathrm{R} \sin \frac{\varphi}{2} \mathrm{~d} \varphi$
$\int_{0}^{\mathrm{s}} \mathrm{ds}^{\prime}=\int_{0}^{2 \pi} 2 \mathrm{R} \sin \frac{\varphi}{2} \mathrm{~d} \varphi \Rightarrow \mathrm{~s}=\left.4 \mathrm{R}\left(-\cos \frac{\varphi}{2}\right)\right|_{0} ^{2 \pi}=8 \mathrm{R}=4 \mathrm{~m}$
10. A body with a mass $m=5 \mathrm{~kg}$ can slide with friction on a horizontal surface if is pushed by a spiral spring, with an elastic constant $\mathrm{k}=200 \mathrm{~N} / \mathrm{m}$, and which was compressed at half of his length $\mathrm{l}=$ 20 cm . Find out:
a) the mechanical work of friction force during expansion.
b) how much must is the friction coefficient if in the final position the spring in not stressed.

R: a) $F_{e}=-k x$
$\mathrm{dW}=\mathrm{F} \cdot \mathrm{dx} \Rightarrow \int_{0}^{\mathrm{W}} \mathrm{dW}=\int_{-1 / 2}^{0} \mathrm{~F} \cdot \mathrm{dx} \Rightarrow \mathrm{W}=\int_{-1 / 2}^{0}-\mathrm{kx} \cdot \mathrm{dx}=-\left.\mathrm{k} \frac{\mathrm{x}^{2}}{2}\right|_{-1 / 2} ^{0}=\mathrm{k} \frac{1}{8}$
$\mathrm{W}=200 \frac{20^{2} \cdot 10^{-4}}{8}=1 \mathrm{~J}$
b) $\Delta \mathrm{E}_{\mathrm{t}}=\mathrm{L}_{\mathrm{f}} \quad \mathrm{E}_{\mathrm{f}}-\mathrm{E}_{\mathrm{i}}=\mathrm{L}_{\mathrm{f}} \quad \Rightarrow \quad 0-\mathrm{k} \frac{\Delta \mathrm{l}^{2}}{2}=-\mu \mathrm{N} \Delta \mathrm{l} \quad \Rightarrow \mu=\frac{\mathrm{k} \Delta \mathrm{l}}{2 \mathrm{mg}}=-\mathrm{N} \Delta \mathrm{l}$
$\mu=\frac{200 \cdot 0.1}{2 \cdot 5 \cdot 9.81}=0.204$
11. A concrete cube with the side of $\mathrm{a}=0.8 \mathrm{~m}$ and a density of $2500 \mathrm{~kg} / \mathrm{m}^{3}$ must be tipped around an edge. Compute:
a. The point of application, direction and value of the minimal force needed to turn turn-over;
b. The expression of a horizontal force that can turn-over the concrete block if this is applied on superior edge as function of rotation angle.
c. The mechanical work spent for turning over the concrete block.

R: $\quad$ a) $\overrightarrow{\mathcal{M}}_{\mathrm{F}}=\overrightarrow{\mathrm{r}} \times \overrightarrow{\mathrm{F}}=\mathrm{r} \cdot \mathrm{F} \cdot \cos (\mathrm{A}(\mathrm{rF})$

$$
\begin{aligned}
& \left\{\begin{array}{l}
\cos (\mathrm{A}(\mathrm{r})=1 \\
\mathrm{r}=\mathrm{a} \sqrt{2} \\
\mathcal{M}_{\mathrm{F} \max }=\mathrm{r} \cdot \mathrm{~F}_{\max } \cdot \cos (\stackrel{\Lambda}{\mathrm{rF}})=\mathrm{a} \sqrt{2} \mathrm{~F}_{\text {max }}
\end{array}\right. \\
& \mathcal{M}_{\mathrm{F} \text { max }}=\mathcal{M}_{\mathrm{G}} \Rightarrow \mathrm{a} \sqrt{2} \mathrm{~F}_{\text {max }}=\mathrm{G} \frac{\mathrm{a}}{2} \Rightarrow \mathrm{~F}_{\max }=\mathrm{mg} \frac{\mathrm{a}}{2 \mathrm{a} \sqrt{2}}=\frac{\rho V \mathrm{~g}}{2 \sqrt{2}}=\frac{\rho \mathrm{ga}^{3}}{2 \sqrt{2}} \\
& \mathrm{~F}_{\text {max }}=\frac{2500 \cdot 9.81 \cdot 0.8^{3}}{2 \sqrt{2}}=4439.5 \mathrm{~N}
\end{aligned}
$$

b)

$$
\begin{aligned}
& \mathcal{M}_{F}=a F(\theta)=a \cdot F \cdot \cos (\theta) \\
& \mathcal{M}_{G}=G \cdot a \frac{\sqrt{2}}{2} \cdot \cos \left(\frac{\pi}{4}+\theta\right) \quad \mathcal{M}_{\mathrm{F}}=\mathcal{M}_{\mathrm{G}} \Rightarrow \mathrm{aF} \cos (\theta)=\mathrm{Ga} \frac{\sqrt{2}}{2} \cos \left(\frac{\pi}{4}+\theta\right) \\

b) $\mathrm{F}_{\mathrm{e}}=-\mathrm{kx}=-\mathrm{kA} \sin \left(\omega \mathrm{t}+\varphi_{0}\right)=\mathrm{F}_{\max } \sin \left(\omega \mathrm{t}+\varphi_{0}\right)$

$$
\begin{aligned}
\mathrm{F}_{\max } & =\mathrm{kA}=\mathrm{m} \omega^{2} \mathrm{~A}=10 \cdot 10^{-3} \cdot \frac{\pi^{2}}{36} \cdot 5 \cdot 10^{-2}=1.37 \cdot 10^{-4} \mathrm{~N} \\
\text { c) } \mathrm{E}_{\mathrm{c}} & =\frac{\mathrm{mv}^{2}}{2}=\frac{\mathrm{mA}^{2} \omega^{2} \cos ^{2}(\omega \mathrm{t})}{2}=\frac{10 \cdot 25 \cdot 10^{-4} \cdot \frac{\pi^{2}}{36}}{2} \cos ^{2}\left(\frac{\pi}{6} \mathrm{t}\right)=3.43 \cdot 10^{-6} \cos ^{2}\left(\frac{\pi}{6} \mathrm{t}\right) \mathrm{J} \\
\mathrm{E}_{\mathrm{p}} & =\frac{\mathrm{kx}^{2}}{2}=\frac{\mathrm{mA}^{2} \omega^{2} \sin ^{2}(\omega \mathrm{t})}{2}=\frac{10 \cdot \frac{\pi^{2}}{36} \cdot 25 \cdot 10^{-4}}{2} \sin ^{2}\left(\frac{\pi}{6} \mathrm{t}\right)=3.43 \cdot 10^{-6} \sin ^{2}\left(\frac{\pi}{6} \mathrm{t}\right) \mathrm{J} \\
\mathrm{E}_{\mathrm{t}} & =\frac{\mathrm{mv}^{2}}{2}+\frac{\mathrm{kx}^{2}}{2}=3.43 \cdot 10^{-6} \mathrm{~J}
\end{aligned}
$$

19. A harmonic oscillator which oscillates with the amplitude, A of 8 mm is after $\tau=0.01 \mathrm{~s}$ from the beginning of motion (from equilibrium position) at the distance 4 mm measured from equilibrium position. Calculate:
a) oscillatory pulsation;
b) oscillatory period;
c) oscillatory frequency;
d) velocity of oscillation in the given position;
e) acceleration of oscillation in the given position.
$R: \quad$ a) $y(t)=A \sin \left(\omega t+\varphi_{0}\right)$
$y(0)=0=A \sin \left(\omega \cdot 0+\varphi_{0}\right) \Rightarrow \sin \left(\varphi_{0}\right)=0 \Rightarrow \varphi_{0}=0$
$\mathrm{y}(\tau)=4=\frac{\mathrm{A}}{2}=\mathrm{A} \sin (\omega \tau) \Rightarrow \sin (\omega \tau)=\frac{1}{2} \Rightarrow \omega \tau=\frac{\pi}{6} \Rightarrow \omega=\frac{\pi}{6 \tau}=\frac{\pi}{6 \cdot 0.01} \Rightarrow \omega=\frac{50}{3} \pi$
b) $\omega=\frac{2 \pi}{\mathrm{~T}} \Rightarrow \mathrm{~T}=\frac{2 \pi}{\omega}=\frac{2 \pi}{\frac{50}{3} \pi} \Rightarrow \mathrm{~T}=0.12 \mathrm{~s}$
c) $v=\frac{1}{\mathrm{~T}}=\frac{1}{0.12} \Rightarrow v=8.33 \mathrm{~Hz}$
d) $\mathrm{v}=\frac{\mathrm{dy}}{\mathrm{dt}}=\omega \mathrm{A} \cos (\omega \mathrm{t}) \Rightarrow \mathrm{v}(\tau)=\frac{50}{3} \pi \cdot 8 \cdot 10^{-3} \cos \left(\frac{50}{3} \pi \cdot 0.01\right)=0.419 \cos \left(\frac{\pi}{6}\right) \Rightarrow$

$$
\mathrm{v}(\tau)=0.36 \mathrm{~m} / \mathrm{s}
$$

e) $\mathrm{a}=\frac{\mathrm{dv}}{\mathrm{dt}}=-\omega^{2} \mathrm{~A} \sin (\omega \mathrm{t}) \Rightarrow \mathrm{a}(\tau)=\frac{2500}{9} \pi^{2} \cdot 8 \cdot 10^{-3} \sin \left(\frac{50}{3} \pi \cdot 0.01\right)=\Rightarrow \mathrm{a}(\tau)=10.97 \frac{\mathrm{~m}}{\mathrm{~s}^{2}}$
20. Calculate the wavelength value of a sound of 440 Hz in air ( $\mathrm{v}_{\mathrm{a}}=340 \mathrm{~m} / \mathrm{s}$ ) and into a tram line ( $\mathrm{v}_{\mathrm{t}}$ $=5000 \mathrm{~m} / \mathrm{s})$. Compute the steel Young modulus if the density is $\left(\rho_{\mathrm{t}}=8000 \mathrm{~kg} / \mathrm{m}^{3}\right)$.
$\mathrm{R}: \lambda_{\mathrm{a}}=\frac{\mathrm{v}_{\mathrm{a}}}{\mathrm{v}}=\frac{340}{440}=0.773 \mathrm{~m}=77.3 \mathrm{~cm}$
$\lambda_{\mathrm{t}}=\frac{\mathrm{v}_{\mathrm{t}}}{\mathrm{v}}=\frac{5000}{440}=11.36 \mathrm{~m}$
$v_{t}=\sqrt{\frac{E}{\rho}} \Rightarrow E=\rho v_{t}^{2}=8 \cdot 10^{3} \cdot\left(5 \cdot 10^{3}\right)^{2}=2 \cdot 10^{11} \frac{N}{\mathrm{~m}^{2}}$
21. In the liquid Helium (below 4.2 K ) the sound velocity is $220 \mathrm{~m} / \mathrm{s}$. If we know the He density $\rho=$ $0.15 \mathrm{~g} / \mathrm{cm}^{3}$ find the compressibility modulus. Compare this result with the water compressibility modulus if we know that the sound velocity is $1460 \mathrm{~m} / \mathrm{s}$.
$R: v_{\mathrm{He}}=\sqrt{\frac{\chi_{\mathrm{He}}}{\rho}} \Rightarrow \chi_{\mathrm{He}}=\rho v_{\mathrm{He}}^{2}=150 \cdot 220^{2}=7.26 \cdot 10^{6} \frac{\mathrm{~N}}{\mathrm{~m}^{2}}$
$\chi_{\mathrm{w}}=\rho \mathrm{v}_{\mathrm{w}}^{2}=1000 \cdot 1460^{2}=2.1316 \cdot 10^{9} \frac{\mathrm{~N}}{\mathrm{~m}^{2}}$
$\frac{\chi_{\mathrm{w}}}{\chi_{\mathrm{He}}}=\frac{2.1316 \cdot 10^{9}}{7.26 \cdot 10^{6}}=293.6$
22. By a copper wire with the length $1=160 \mathrm{~cm}$ and diameter $\phi=1 \mathrm{~mm}$ is suspended a body with mass 10 kg . If the copper wire elongation is 2.56 mm find out:
a) The stress, $\sigma=\frac{F}{S}$, strain, $\varepsilon=\frac{\Delta l}{l}$ and elastic constant, k;
b) The Young modulus, E;
c) How much is the inter-atomic distance if in the unstressed material is $\mathrm{R}_{0}=2.56 \mathrm{~A}^{\circ}$;
$\mathrm{R}: \quad$ a) $\sigma=\frac{\mathrm{F}}{\mathrm{S}}=\frac{\mathrm{mg}}{\pi \mathrm{r}^{2}}=\frac{4 \mathrm{mg}}{\pi \mathrm{d}^{2}}=\frac{4 \cdot 10 \cdot 9.81}{\pi \cdot 10^{-6}}=1.25 \cdot 10^{8} \frac{\mathrm{~N}}{\mathrm{~m}^{2}}$
$\varepsilon=\frac{\Delta \mathrm{l}}{\mathrm{l}}=\frac{2.56 \cdot 10^{-3}}{1.6}=1.6 \cdot 10^{-3}=0.16 \%$
$\mathrm{F}=-\mathrm{F}_{\mathrm{e}}=\mathrm{k} \Delta \mathrm{l}=\mathrm{mg} \Rightarrow \mathrm{k}=\frac{\mathrm{mg}}{\Delta \mathrm{l}}=\frac{10 \cdot 9.81}{2.56 \cdot 10^{-3}}=3.83 \cdot 10^{-4} \frac{\mathrm{~N}}{\mathrm{~m}}$
b) $\frac{\mathrm{F}}{\mathrm{S}}=\mathrm{E} \frac{\Delta \mathrm{l}}{\mathrm{l}} \Rightarrow \sigma=\mathrm{E} \varepsilon \Rightarrow \mathrm{E}=\frac{\sigma}{\varepsilon}=\frac{1.25 \cdot 10^{8}}{1.6 \cdot 10^{-3}}=7.8 \cdot 10^{10} \frac{\mathrm{~N}}{\mathrm{~m}^{2}}$
c) $\frac{\Delta \mathrm{R}}{\mathrm{R}_{0}}=\frac{\Delta \mathrm{l}}{\mathrm{l}} \Rightarrow \Delta \mathrm{R}=\frac{\Delta \mathrm{l}}{\mathrm{l}} \mathrm{R}_{0}=\varepsilon \mathrm{R}_{0}=1.6 \cdot 10^{-3} \cdot 2.56 \cdot 10^{-10}=4.096 \cdot 10^{-13} \mathrm{~m}$.
23. In front of a microphone a sound has the pressure of $0.441 \mathrm{~Pa}\left(\mathrm{~N} / \mathrm{m}^{2}\right)$. How much we have to amplify the sound in order to reach the pain threshold, $\mathrm{I}_{\text {pain }}=10^{2} \mathrm{~W} / \mathrm{m}^{2}$ ? We know the air acoustic impedance $\mathrm{Z}_{\mathrm{a}}=\rho \mathrm{c}=441 \mathrm{~kg} / \mathrm{m}^{2} \mathrm{~s}$. How much is the pressure and the sound level?

R: $\quad N_{m}+N_{A}=N_{L} \Rightarrow N_{A}=N_{L}-N_{m}$
$\mathbf{N}_{\mathrm{m}}=10 \lg \left(\frac{\mathbf{I}_{\mathrm{m}}}{\mathbf{I}_{\mathrm{o}}}\right) \quad \mathrm{N}_{\mathrm{L}}=10 \lg \left(\frac{\mathrm{I}_{\mathrm{L}}}{\mathrm{I}_{0}}\right)$
$N_{A}=N_{L}-N_{m} \quad \Rightarrow \quad N_{A}=10 \lg \left(\frac{I_{L}}{I_{0}}\right)-10 \lg \left(\frac{I_{m}}{I_{0}}\right)=10 \lg \left(\frac{I_{L}}{I_{m}}\right)$
$\left\{\begin{array}{l}I_{L}=I_{p a i n} \\ I_{m}=\frac{p^{2}}{\rho c}=\frac{p^{2}}{Z_{a}}=\frac{0.441^{2}}{441}=4.41 \times 10^{-4} \frac{\mathrm{~W}}{\mathrm{~m}^{2}}\end{array}\right.$

$$
\begin{aligned}
& \mathrm{N}_{\mathrm{A}}=10 \lg \left(\frac{\mathrm{I}_{\mathrm{L}}}{\mathrm{I}_{\mathrm{m}}}\right)=10 \lg \left(\frac{10^{2}}{4.41 \cdot 10^{-4}}\right)=60 \lg \left(\frac{1}{4.41}\right) \\
& \mathrm{N}_{\mathrm{A}}=53.5 \mathrm{~dB}
\end{aligned}
$$

24. Find the relation between the intensity of wave into an absorbed media as a function of depth of penetration and absorption coefficient.

R:
$\mathrm{dI}=-\alpha \mathrm{Idx} \Rightarrow \frac{\mathrm{dI}}{\mathrm{I}}=-\alpha \mathrm{dx} \Rightarrow \int_{\mathrm{I}_{0}}^{\mathrm{I}(\mathrm{x})} \frac{\mathrm{dI}}{\mathrm{I}}=\int_{0}^{\mathrm{x}}-\alpha \mathrm{dx} \quad \Rightarrow \ln \left(\frac{\mathrm{I}(\mathrm{x})}{\mathrm{I}_{0}}\right)=-\alpha \mathrm{x} \quad \Rightarrow \quad \mathrm{I}(\mathrm{x})=\mathrm{I}_{0} \mathrm{e}^{-\alpha \mathrm{x}}$
25. Hydrogen atom is constituted from a proton and an electron with equal electrical charges but opposite sign, and absolute value $e=1.6 \times 10^{-19} \mathrm{C}$. In the fundamental state, the radius of electron first orbit around proton is $r_{0}=0.53 \times 10^{-10} \mathrm{~m}$. Calculate the attraction force between proton and electron.

R:

$$
\begin{aligned}
& \mathrm{F}_{\mathrm{C}}=-\frac{1}{4 \pi \varepsilon_{0}} \frac{\mathrm{e}^{2}}{\mathrm{r}_{0}^{2}}=-9 \cdot 10^{9} \frac{\left(1.6 \cdot 10^{-19}\right)^{2}}{\left(5.3 \cdot 10^{-11}\right)^{2}}=-9 \cdot \frac{1.6^{2}}{5.3^{2}} \cdot 10^{9-38+22}=-0.82 \cdot 10^{-7} \\
& \mathrm{~F}_{\mathrm{C}}=-8.2 \cdot 10^{-8} \mathrm{~N}
\end{aligned}
$$

26. What is the value of equal electrical charges, whit which two identical balls, having the same mass 1 kg , must be charged, if these are situated in air at 1 mm distance, and the Coulombian force that acts on each ball is equal in value with the ball weight into a place in which the gravitational acceleration is $g=9.8 \mathrm{~m} / \mathrm{s}^{2}$.

R:
$F_{C}=-k_{e} \frac{e^{2}}{r_{p p}^{2}} \quad F_{G}=-k_{g} \frac{m_{p}^{2}}{r_{p p}^{2}}$
$\frac{\mathrm{F}_{\mathrm{C}}}{\mathrm{F}_{\mathrm{G}}}=-\mathrm{k}_{\mathrm{e}} \frac{\mathrm{e}^{2}}{\mathrm{r}_{\mathrm{pp}}^{2}} /-\mathrm{k}_{\mathrm{g}} \frac{\mathrm{m}_{\mathrm{p}}^{2}}{\mathrm{r}_{\mathrm{pp}}^{2}}=\frac{\mathrm{k}_{\mathrm{e}}}{\mathrm{k}_{\mathrm{g}}} \frac{\mathrm{e}^{2}}{\mathrm{~m}_{\mathrm{p}}^{2}}=\frac{9 \cdot 10^{9}}{6.67 \cdot 10^{-11}} \frac{\left(1.6 \cdot 10^{-19}\right)^{2}}{\left(1.67 \cdot 10^{-27}\right)^{2}}=\frac{9 \cdot 1.6^{2}}{6.67 \cdot 1.67^{2}} \cdot 10^{9-38+11+54}$
$\frac{\mathrm{F}_{\mathrm{C}}}{\mathrm{F}_{\mathrm{G}}}=1.238 \cdot 10^{36}$
27. Two small identical spheres placed in void, having the same mass $\mathrm{m}=0.1 \mathrm{~kg}$ are suspended from a single point with the help of two isolated wires, not extensible, of neglected mass and with the same length $l=20 \mathrm{~cm}$. What is the value of the equal charges with which the two spheres must be charged is such way that the angle between the fires should be $2 \alpha=90^{\circ}$ ? The gravitational accelerations is considered $\mathrm{g}=9.8 \mathrm{~m} / \mathrm{s}^{2} .(\sin 45=0.707 ; \operatorname{tg} 45=1)$.

$\mathrm{G}=\mathrm{mg} \mathrm{d}=21 \sin \alpha$
$\operatorname{tg} \frac{\alpha}{2}=\frac{F_{C}}{G}=\frac{k_{e} \frac{q^{2}}{d^{2}}}{m g} \Rightarrow q=d \sqrt{\frac{\mathrm{~m} \cdot \mathrm{~g} \cdot \operatorname{tg} \frac{\alpha}{2}}{\mathrm{k}_{\mathrm{e}}}}=21 \cdot \sin \frac{\alpha}{2} \sqrt{\frac{\mathrm{~m} \cdot \mathrm{~g} \cdot \operatorname{tg} \frac{\alpha}{2}}{\mathrm{k}_{\mathrm{e}}}}$
$\mathrm{q}=2 \cdot 0.2 \cdot \sin \left(45^{0}\right) \sqrt{\frac{0.1 \cdot 9.8 \cdot \operatorname{tg}\left(45^{0}\right)}{9 \cdot 10^{9}}} \quad \mathrm{q}=0.4 \cdot 0.707 \sqrt{\frac{0.98 \cdot 1}{90}} \cdot 10^{-4}=2.95 \cdot 10^{-6}$
$\mathrm{q}=2.95 \cdot 10^{-6} \mathrm{C}$
28. Calculate the dependence of electrical field intensity and electrical potential on the center of a sphere having the electrical charge uniform distributed in the entire volume. The total charge is denoted by Q and the sphere radius by R .
$R$ : a) $r<R$;

$$
\begin{aligned}
& \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{~d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \\
& \quad \Rightarrow \mathrm{E} \cdot \oint_{\Sigma} \mathrm{d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \mathrm{E} \cdot 4 \pi \cdot \mathrm{r}^{2}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}}
\end{aligned}
$$

$\rho=\frac{\mathrm{Q}}{\mathrm{V}}=\frac{\mathrm{Q}}{\frac{4 \pi \mathrm{R}^{3}}{3}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\frac{4 \pi r^{3}}{3}} \Rightarrow \mathrm{Q}_{\mathrm{i}}=\frac{\mathrm{r}^{3}}{\mathrm{R}^{3}} \mathrm{Q}$
$\overrightarrow{\mathrm{E}} \cdot 4 \pi \cdot \mathrm{r}^{2}=\frac{1}{\varepsilon_{0}} \frac{\mathrm{r}^{3}}{\mathrm{R}^{3}} \mathrm{Q} \Rightarrow \overrightarrow{\mathrm{E}}=\frac{\mathrm{Q}}{4 \pi \cdot \varepsilon_{0}} \frac{\mathrm{r}}{\mathrm{R}^{3}}$
$\vec{E}=-\nabla V=-\frac{d V}{d r} d V=-E \cdot d r \Rightarrow \int_{V(0)}^{V(r)} d V=-\int_{0}^{r} E \cdot d r^{\prime} \Rightarrow V(r)-V(0)=-\int_{0}^{r} \frac{Q}{4 \pi \cdot \varepsilon_{0}} \frac{r^{\prime}}{R^{3}} \cdot d r^{\prime}$

$$
\mathrm{V}(\mathrm{r})=-\frac{\mathrm{Q}}{4 \pi \cdot \varepsilon_{0}} \frac{1}{\mathrm{R}^{3}} \int_{0}^{\mathrm{r}} \mathrm{r}^{\prime} \cdot \mathrm{dr} \quad \mathrm{~V}(\mathrm{r})=-\frac{\mathrm{Q}}{4 \pi \cdot \varepsilon_{0}} \frac{1}{\mathrm{R}^{3}} \frac{\mathrm{r}^{2}}{2} \quad \mathrm{~V}(\mathrm{r})=-\frac{\mathrm{Q}}{8 \pi \cdot \varepsilon_{0}} \frac{\mathrm{r}^{2}}{\mathrm{R}^{3}}
$$

b) $\mathrm{r}>\mathrm{R}$;
$\oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{d} \overrightarrow{\mathrm{s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \quad \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \overrightarrow{\mathrm{E}} \cdot \oint_{\Sigma} \mathrm{d} \overrightarrow{\mathrm{s}}=\frac{\mathrm{Q}}{\varepsilon_{0}} \Rightarrow \overrightarrow{\mathrm{E}} \cdot 4 \pi \cdot \mathrm{r}^{2}=\frac{\mathrm{Q}}{\varepsilon_{0}} \quad \overrightarrow{\mathrm{E}}=\frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{r}^{2}}$
$\overrightarrow{\mathrm{E}}=-\nabla \mathrm{V}=-\frac{\mathrm{dV}}{\mathrm{dr}} \quad \Rightarrow \quad \mathrm{dV}=-\mathrm{E} \cdot \mathrm{dr} \quad \Rightarrow \quad \int_{\mathrm{V}(\mathrm{R})}^{\mathrm{V}(\mathrm{r})} \mathrm{dV}=-\int_{\mathrm{R}}^{\mathrm{r}} \mathrm{E} \cdot \mathrm{dr}^{\prime} \quad \Rightarrow$
$\mathrm{V}(\mathrm{r})-\mathrm{V}(\mathrm{R})=-\int_{\mathrm{R}}^{\mathrm{r}} \frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{r}^{\prime 2}} \cdot \mathrm{dr}^{\prime} \Rightarrow \mathrm{V}(\mathrm{r})-\mathrm{V}(\mathrm{R})=-\frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{r}^{2}} \int_{\mathrm{R}}^{\mathrm{r}} \frac{1}{\mathrm{r}^{\prime 2}} \cdot \mathrm{dr}^{\prime}$
$\mathrm{V}(\mathrm{r})-\mathrm{V}(\mathrm{R})=\frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{r}^{2}} \int_{\mathrm{R}}^{\mathrm{r}} \mathrm{d}\left(\frac{1}{\mathrm{r}^{\prime}}\right) \Rightarrow \mathrm{V}(\mathrm{r})-\mathrm{V}(\mathrm{R})=\frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{r}}-\frac{\mathrm{Q}}{4 \pi \varepsilon_{0} \mathrm{R}}$
$V(r)=\frac{Q}{4 \pi \varepsilon_{0} r}$
29. Calculate the electric field intensity at a distance $\boldsymbol{a}$ from a rod, uniformly charged with a total charge Q .

R: $\quad \mathrm{dE}=\frac{1}{4 \pi \varepsilon_{0}} \frac{\mathrm{dQ}}{\mathrm{r}^{2}} \quad \mathrm{dE}_{\mathrm{t}}=2 \mathrm{dE}_{\mathrm{y}}=2 \mathrm{dE} \cdot \sin \alpha$

$$
\sin \alpha=\frac{a}{r}
$$

$$
\lambda=\frac{\mathrm{Q}}{\mathrm{l}}=\frac{\mathrm{dQ}}{\mathrm{dl}} \quad \mathrm{dQ}=\lambda \mathrm{dl}=\lambda \mathrm{dx}
$$

$$
\mathrm{r}^{2}=\mathrm{a}^{2}+\mathrm{x}^{2}
$$

$$
\int_{0}^{\mathrm{E}_{\mathrm{t}}} \mathrm{dE}_{\mathrm{t}}=\int_{0}^{1 / 2} 2 \sin \alpha \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda \mathrm{dx}}{\mathrm{r}^{2}} \Rightarrow \mathrm{E}_{\mathrm{t}}=2 \frac{\lambda \cdot \mathrm{a}}{4 \pi \varepsilon_{0}} \int_{0}^{1 / 2} \frac{\mathrm{dx}}{\mathrm{r}^{3}}=2 \frac{\lambda \cdot \mathrm{a}}{4 \pi \varepsilon_{0}} \int_{0}^{1 / 2} \frac{\mathrm{dx}}{\left(\mathrm{a}^{2}+\mathrm{x}^{2}\right)^{3 / 2}}
$$

$$
d\left(x\left(a^{2}+x^{2}\right)^{-\frac{1}{2}}\right)=d x \cdot\left(a^{2}+x^{2}\right)^{-\frac{1}{2}}+x\left(-\frac{1}{2}\right)\left(a^{2}+x^{2}\right)^{-\frac{3}{2}} 2 x \cdot d x=\frac{1}{\left(a^{2}+x^{2}\right)^{\frac{1}{2}}}\left[1-\frac{x^{2}}{\left(a^{2}+x^{2}\right)}\right] d x
$$

$$
=\frac{a^{2}+x^{2}-x^{2}}{\left(a^{2}+x^{2}\right)^{\frac{3}{2}}} d x=\frac{a^{2}}{\left(a^{2}+x^{2}\right)^{\frac{3}{2}}} d x
$$

$$
\mathrm{E}_{\mathrm{t}}=2 \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda}{\mathrm{a}} \int_{0}^{1 / 2} \frac{\mathrm{a}^{2} \cdot \mathrm{dx}}{\left(\mathrm{a}^{2}+\mathrm{x}^{2}\right)^{3 / 2}}=2 \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda}{\mathrm{a}} \int_{0}^{1 / 2} \mathrm{~d}\left(\frac{\mathrm{x}}{\sqrt{\mathrm{a}^{2}+\mathrm{x}^{2}}}\right)=\left.2 \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda}{\mathrm{a}}\left(\frac{\mathrm{x}}{\sqrt{\mathrm{a}^{2}+\mathrm{x}^{2}}}\right)\right|_{0} ^{1 / 2}
$$

$$
=2 \frac{1}{4 \pi \varepsilon_{0}} \frac{\lambda}{\mathrm{a}} \frac{\mathrm{l} / 2}{\sqrt{\mathrm{a}^{2}+\frac{\mathrm{l}^{2}}{4}}}=\frac{1}{4 \pi \varepsilon_{0}} \frac{\mathrm{Q}}{\mathrm{a} \cdot 1} \frac{1}{\sqrt{\mathrm{a}^{2}+\frac{\mathrm{l}^{2}}{4}}}
$$

$$
\mathrm{E}_{\mathrm{t}}=\frac{1}{4 \pi \varepsilon_{0}} \frac{\mathrm{Q}}{2 \mathrm{a} \sqrt{4 \mathrm{a}^{2}+\mathrm{l}^{2}}}
$$

30. Let's consider a coaxial cable constituted from two conductors having the radius $\boldsymbol{a}$ and $\boldsymbol{b}$, with $\boldsymbol{a}<\boldsymbol{b}$. Use the Gauss theorem to determine the dependence of electrical field intensity and electric potential from the coaxial cable axes. Calculate the coaxial cable capacity. The cable length is labeled by $l$ is charged with an electrical charge $\boldsymbol{q}$.

R: a) r $<\mathrm{a}$;

$$
\oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{~d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{~d} \overrightarrow{\mathrm{~s}}=\frac{0}{\varepsilon_{0}} \Rightarrow \overrightarrow{\mathrm{E}}=0
$$

$\overrightarrow{\mathrm{E}}=-\nabla \mathrm{V}=-\frac{\mathrm{dV}}{\mathrm{dr}} \Rightarrow \mathrm{dV}=-\mathrm{E} \cdot \mathrm{dr} \Rightarrow \mathrm{dV}=0 \Rightarrow \mathrm{~V}=$ const
b) $\mathrm{r}>\mathrm{b}$;
$\oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{d} \overrightarrow{\mathrm{s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{d} \overrightarrow{\mathrm{s}}=\frac{0}{\varepsilon_{0}} \Rightarrow \overrightarrow{\mathrm{E}}=0$
$\overrightarrow{\mathrm{E}}=-\nabla \mathrm{V}=-\frac{\mathrm{dV}}{\mathrm{dr}} \Rightarrow \mathrm{dV}=-\mathrm{E} \cdot \mathrm{dr} \Rightarrow \mathrm{dV}=0 \Rightarrow \mathrm{~V}=\mathrm{const}$
c) $\mathrm{a}<\mathrm{r}<\mathrm{b}$;

$$
\begin{aligned}
& \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{~d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma_{1}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}+\oint_{\Sigma_{2}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}+\oint_{\Sigma_{3}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \\
& \quad \Rightarrow \mathrm{E} \cdot \oint_{\Sigma} \mathrm{d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \mathrm{E} \cdot 2 \pi \mathrm{r} \cdot 1=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}}
\end{aligned}
$$

$$
\lambda=\frac{\mathrm{Q}}{\mathrm{~L}}=\frac{\mathrm{Q}_{\mathrm{i}}}{1} \Rightarrow \mathrm{E} \cdot 2 \pi \mathrm{r} \cdot \mathrm{l}=\frac{\lambda \cdot 1}{\varepsilon_{0}} \Rightarrow \mathrm{E}=\frac{\lambda}{2 \pi \mathrm{r} \varepsilon_{0}} \Rightarrow \mathrm{E}=\frac{\mathrm{Q}}{2 \pi l \varepsilon_{0}} \frac{1}{\mathrm{r}}
$$

$$
\overrightarrow{\mathrm{E}}=-\nabla \mathrm{V}=-\frac{\mathrm{dV}}{\mathrm{dr}} \mathrm{dV}=-\mathrm{E} \cdot \mathrm{dr} \Rightarrow \int_{\mathrm{V}(\mathrm{a})}^{\mathrm{V}(\mathrm{~b})} \mathrm{dV}=-\int_{\mathrm{a}}^{\mathrm{b}} \frac{\mathrm{Q}}{2 \pi l \varepsilon_{0}} \frac{1}{\mathrm{r}^{\prime}} \cdot \mathrm{dr}^{\prime} \Rightarrow
$$

$$
\mathrm{V}(\mathrm{a})-\mathrm{V}(\mathrm{~b})=\frac{\mathrm{Q}}{2 \pi 1 \varepsilon_{0}} \int_{\mathrm{a}}^{\mathrm{b}} \frac{1}{\mathrm{r}^{\prime}} \cdot \mathrm{dr}^{\prime} \quad \mathrm{V}(\mathrm{a})-\mathrm{V}(\mathrm{~b})=\mathrm{U}=\frac{\mathrm{Q}}{2 \pi 1 \varepsilon_{0}} \ln \left(\frac{\mathrm{~b}}{\mathrm{a}}\right)
$$

$$
\mathrm{V}(\mathrm{r})=\frac{\mathrm{Q}}{2 \pi l \varepsilon_{0}} \ln (\mathrm{r}) \quad \mathrm{C}=\frac{\mathrm{Q}}{\mathrm{U}}=\frac{2 \pi 1 \varepsilon_{0}}{\ln \left(\frac{\mathrm{~b}}{\mathrm{a}}\right)}
$$

31. Use the Gauss theorem to calculate the expression of a plane capacitor capacity.

R:

$$
\begin{aligned}
& \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \mathrm{~d} \overrightarrow{\mathrm{~s}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow \oint_{\Sigma} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \\
& \quad \Rightarrow \oint_{\mathrm{S}_{1}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}+\oint_{\mathrm{S}_{2}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}+\oint_{\mathrm{S}_{1}} \overrightarrow{\mathrm{E}} \cdot \overrightarrow{\mathrm{n}} \cdot \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \\
& \Rightarrow \mathrm{E} \cdot \oint_{\mathrm{S}_{1}} \mathrm{ds}+\mathrm{E} \cdot \oint_{\mathrm{S}_{2}} \mathrm{ds}+0=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \Rightarrow 2 \mathrm{E} \cdot \oint_{\mathrm{S}_{1}} \mathrm{ds}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} \\
& \Rightarrow 2 \mathrm{E} \cdot \mathrm{~S}_{1}=\frac{\mathrm{Q}_{\mathrm{i}}}{\varepsilon_{0}} ; \quad \sigma=\frac{\mathrm{Q}}{\mathrm{~S}}=\frac{\mathrm{Q}_{\mathrm{i}}}{\mathrm{~S}_{1}} ; \quad \quad \mathrm{Q}_{\mathrm{i}}=\sigma \cdot \mathrm{S}_{1} \\
& \Rightarrow 2 \mathrm{E} \cdot \mathrm{~S}_{1}=\frac{\sigma \cdot \mathrm{S}_{1}}{\varepsilon_{0}} \Rightarrow \mathrm{E}=\frac{\sigma}{2 \varepsilon_{0}} \quad \mathrm{E}_{\mathrm{C}}=2 \mathrm{E}=\frac{\sigma}{\varepsilon_{0}}
\end{aligned}
$$

$$
\overrightarrow{\mathrm{E}}=-\nabla \mathrm{V}=-\frac{\mathrm{dV}}{\mathrm{dx}} \mathrm{dV}=-\mathrm{E} \cdot \mathrm{dx} \Rightarrow \int_{\mathrm{V}(\mathrm{a})}^{\mathrm{V}(\mathrm{~b})} \mathrm{dV}=-\mathrm{E} \cdot \int_{\mathrm{a}}^{\mathrm{b}} \mathrm{dr} \quad \Rightarrow
$$

$$
V(a)-V(b)=E(b-a)
$$

$\mathrm{V}(\mathrm{a})-\mathrm{V}(\mathrm{b})=\mathrm{U}=\mathrm{E} \cdot \mathrm{d} \quad \mathrm{U}=\frac{\sigma}{\varepsilon_{0}} \cdot \mathrm{~d}=\frac{\mathrm{Q}}{\varepsilon_{0} \cdot \mathrm{~S}} \cdot \mathrm{~d} \quad \mathrm{C}=\frac{\mathrm{Q}}{\mathrm{U}}=\frac{\varepsilon_{0} \cdot \mathrm{~S}}{\mathrm{~d}}$
32. Apply the Ampere's law to calculate the magnetic induction a) at a distance $r$ from an infinitely long conductor b) and inside of an infinitely long solenoid (coil).

33. Two electrical currents $I_{1}=5 \mathrm{~A}$ and $\mathrm{I}_{2}=10 \mathrm{~A}$ of the same sense are flowing through two parallel conductors, situated at a distance $\mathrm{d}_{1}=20 \mathrm{~cm}$ one from each other. Calculate:
a) The force per unit length with which the two conductors are mutually attracting;
b) The mechanical work per unitary length spend to move the conductors at distance $\mathrm{d}_{2}=30 \mathrm{~cm}$ one from each other. $\left(\mu_{0}=4 \pi \times 10^{-7} \mathrm{H} / \mathrm{m}\right)$.
34. An electrical current with $\mathrm{I}=10 \mathrm{~A}$ is flowing through a straight line infinite long conductor which is placed in the plane of a rectangular frame parallel with two of his sides, like in the figure. We know the $\mathrm{a}=\mathrm{c}=20$ cm and $\mathrm{b}=30 \mathrm{~cm}$. Compute: a ) the magnetic flux through the rectangular frame; b) the force that acts on each side of the frame; c) the total force that acts on the frame when through this a I' $=5$ A electrical current is passing through. What is the sense of this electrical current to observe an attraction force?
